

Richpanel

1. Desktop view:

2.Mobile View:

3. Work Progress:

- It has a search box to search for cities.
Implemented
- While searching for cities temperature and day type is visible.
Not yet complete.
- Tabs showing 5-7 days of weather forecast from the current day
(scrollable)
The temperature for the next 5 days is displayed(obtained from API). However, Day Type and weather type are not yet dynamic data.
- A summary showing temperature in Celsius and Day Type (Get the Icons from <https://www.flaticon.com/>).
Temperature is being displayed dynamically according to the city entered by user.
- A Chart showing temperature variation of 24 hours. (scrollable)
A demo ChartJS graph, Not the dynamic one.
- Another block showing Pressure and Humidity
Implemented.
- And finally, a chart with Sunrise and Sunset timings. Note the position of sun/moon here, they are shifting as per the current time and calculated based on the sunset and sunrise timings. (This is optional, but having plus point on the assignment)
Not yet complete.
